

Five Key Transformations

for

Agile IT Delivery

Culture of code

Heavy emphasis on build rather than buy

Feature focus

Countinuous delivery of new functionality

IT as a gate keeper

Changes dependent on technical expertise

IT team demarcation

Development and operations work seperately

Rigid infrastructure

Hardwired stacks and disjointed tools

Code by exception

Exploit packages and/or SaaS by preference

Needs focus

Rapid content refresh and ease of engagement

Empowered users

Business-driven publishing and change

DevOps approach

Harmonised delivery and improvement

Dynamic infrastructure

Instrumented cloud-style architecture
