

# Simplify storage management

Improve performance and save money

# Why are we here?

Storage sprawl has become impossible to manage manually. What do you do now?

# On our Regcast today

James Hall, **HP**

Martin Riley, **HP**

Tony Lock, **Freeform Dynamics**

Tim Phillips, **Reg**

# What's out there?

- Confusion
- Lack of accurate information
- Variable utilisation

Management challenges and skills

# More choices, more solutions, more to manage

Storage

# More data, more applications, more performance

Fuelling storage growth and sprawl = Increased management and complexity

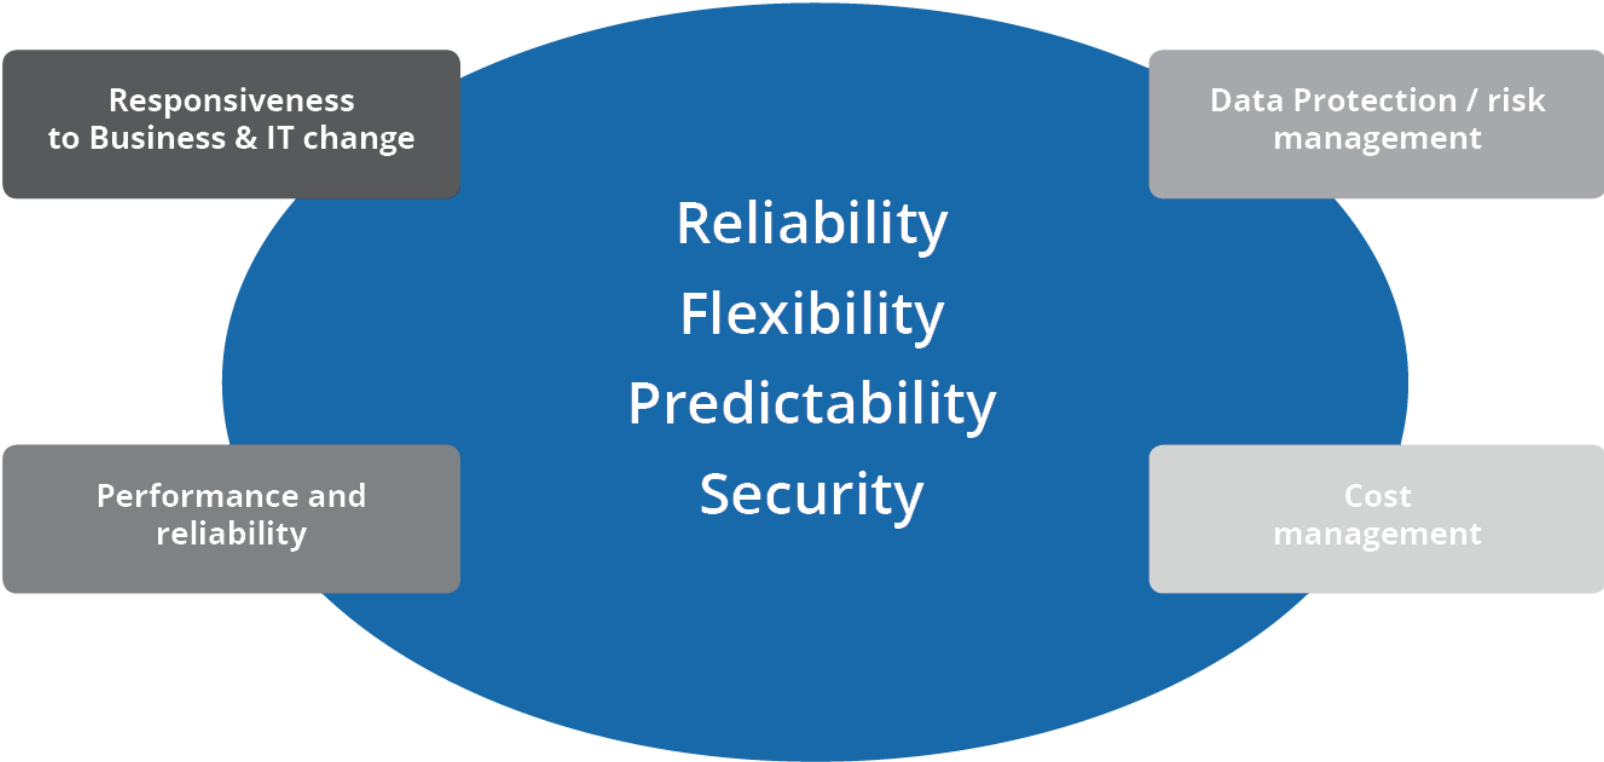

Source: HP internal analysis

# New challenges compound storage management

# Business stakeholder demands

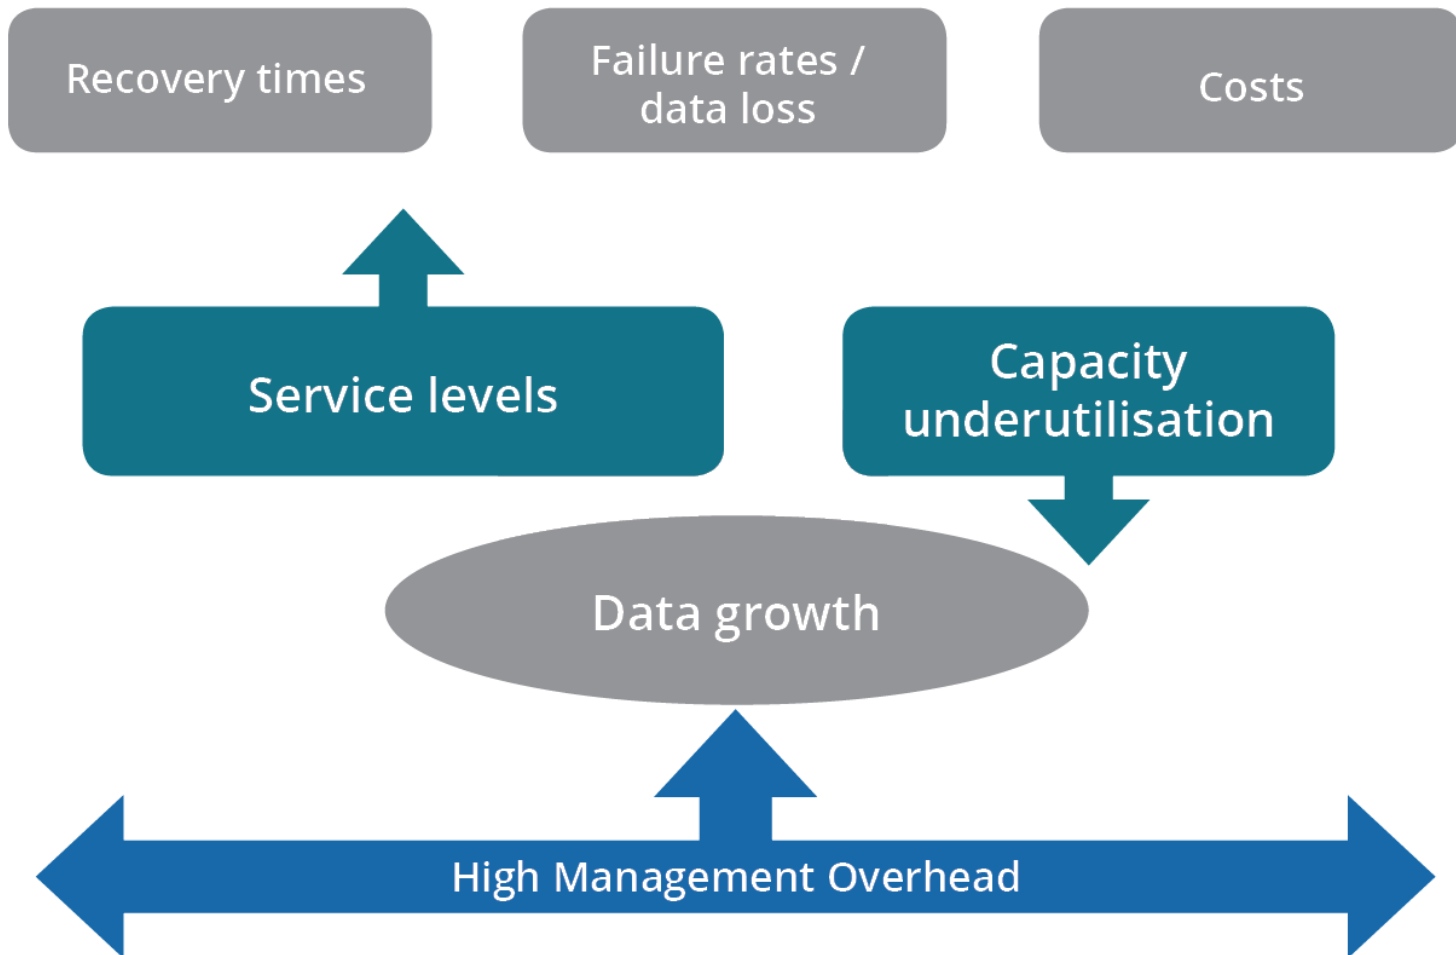

# The IT report card

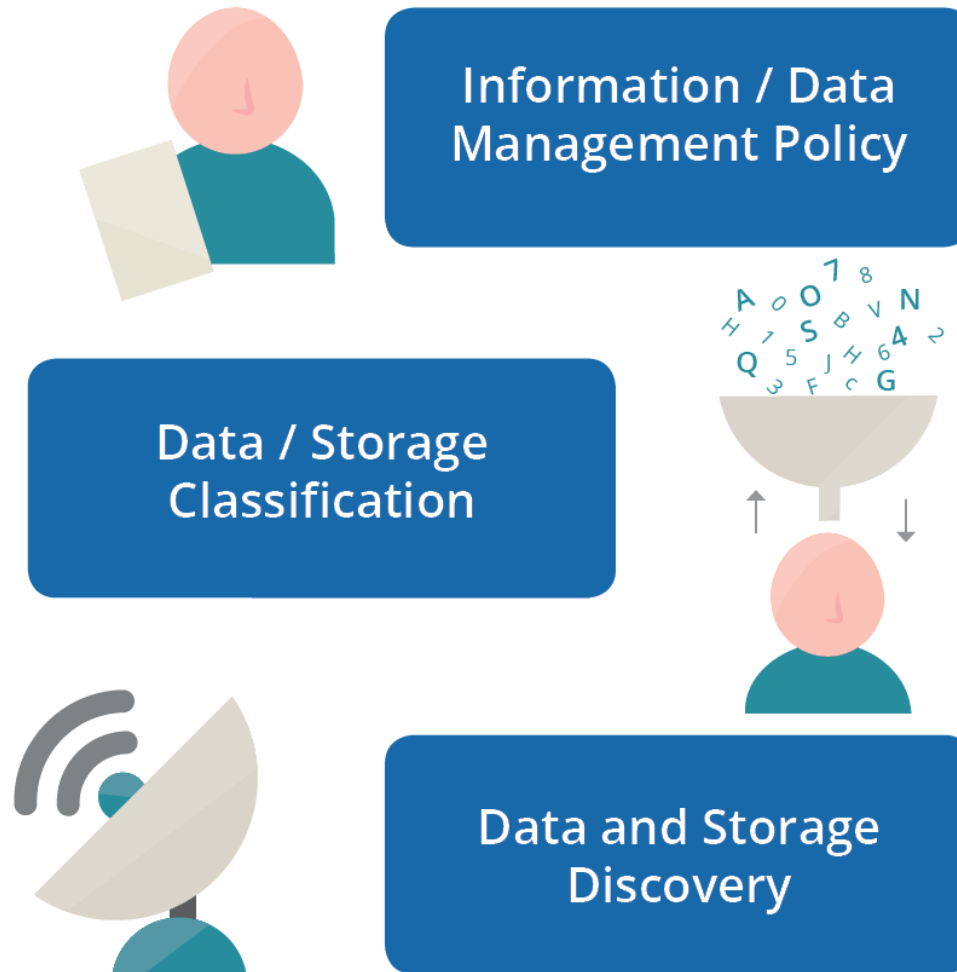

Generally speaking, how easy or hard are the following in your environment?

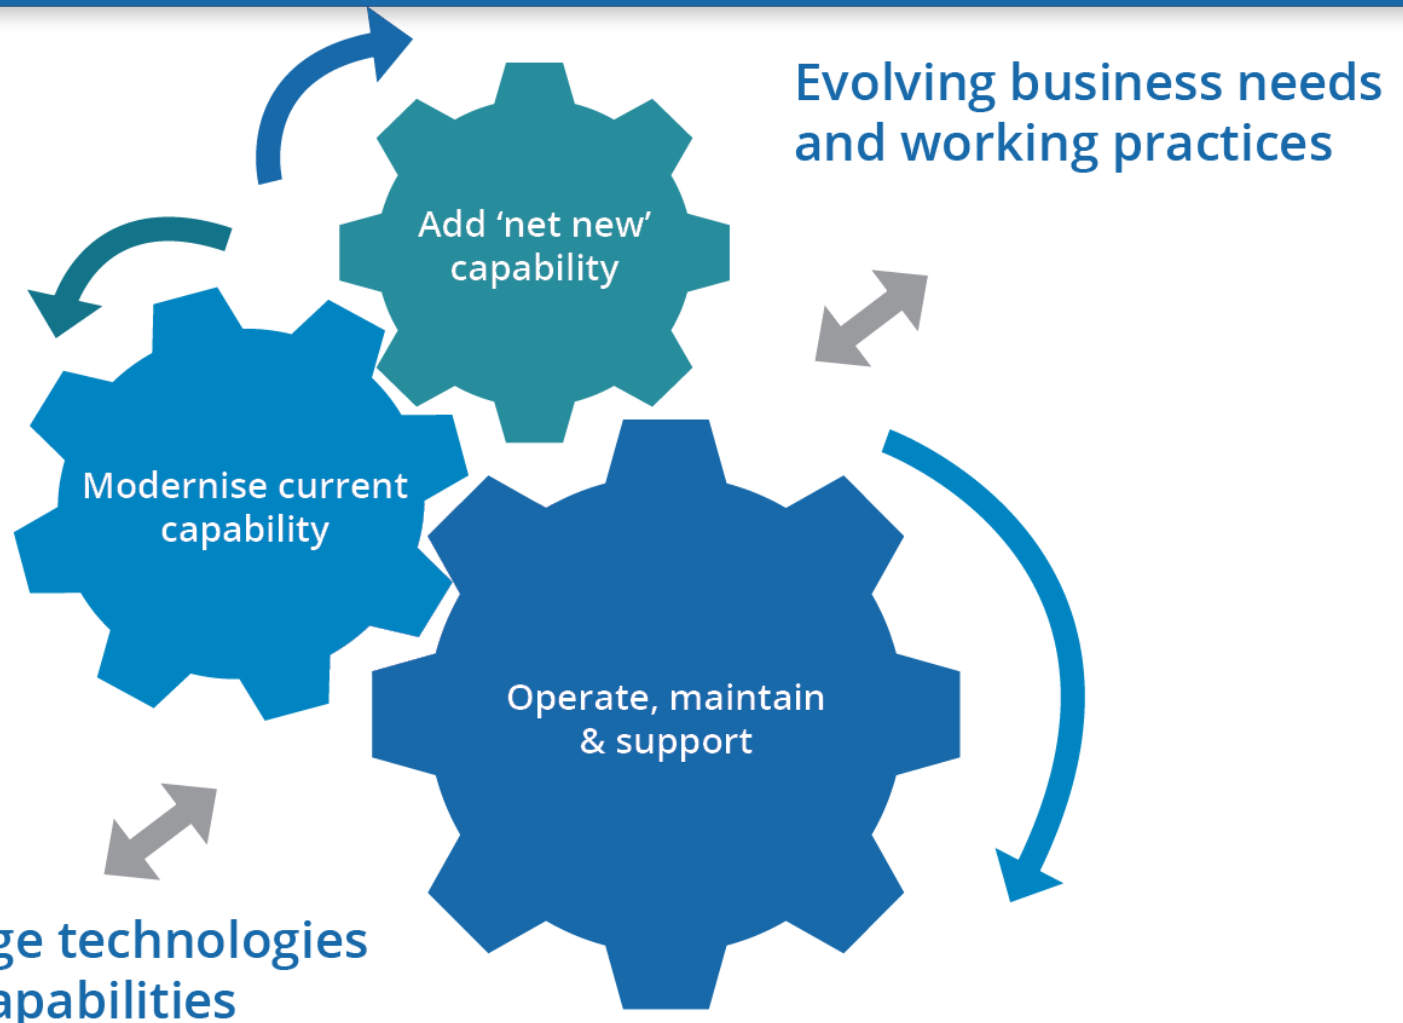

# Storage challenges

# Where to start?

# How to move forwards

Evolving storage technologies and services capabilities

Evolving business needs and working practices

# The need for an autonomic storage architecture

## Traditional Modular Storage

### Host Connectivity

### Disk Connectivity

Cost-efficient active-passive dual-controller design limited in scalability and resiliency.

## Traditional Monolithic Storage

### Host Connectivity

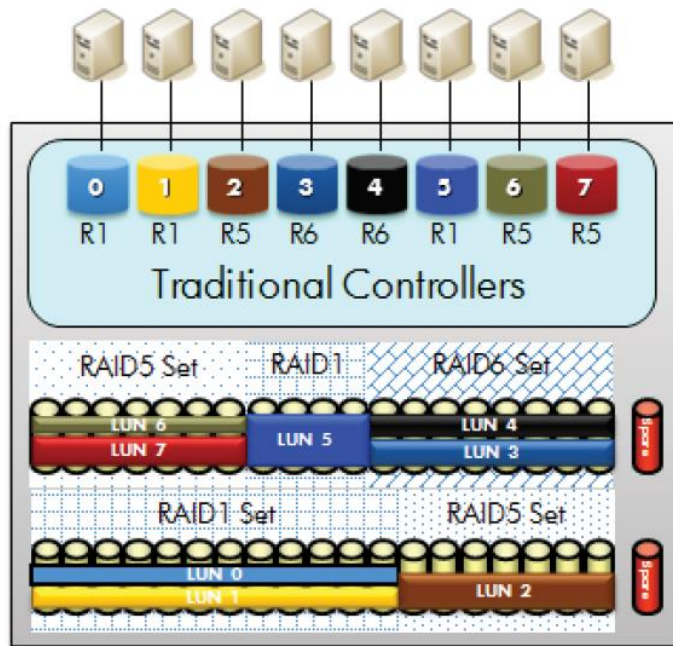

### Disk Connectivity

Scalable, resilient and active-active but costly. Might not meet multi-tenant requirements efficiently

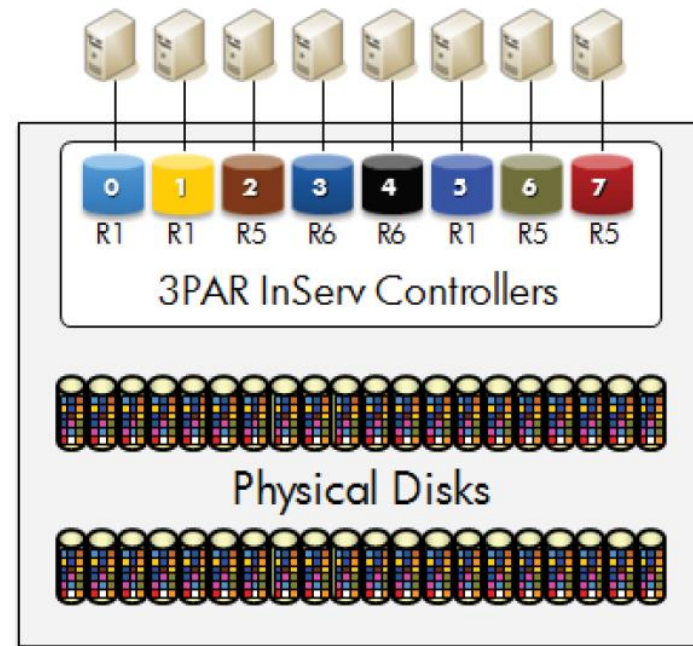

# Autonomic storage reduces management and complexity

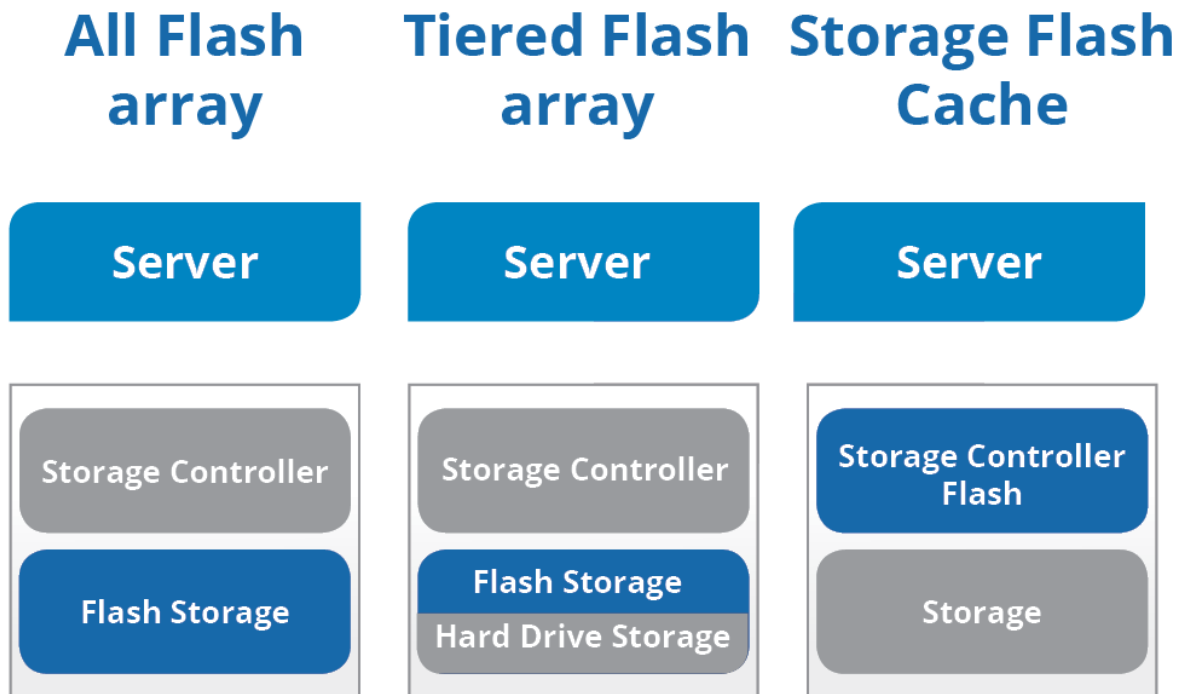

- Each RAID level requires dedicated disks
- Dedicated spare disk required
- Limited single LUN performance

- All RAID level can reside on same disks
- Distributed sparing, no dedicated spare disk
- Built-in wide-striping based on Chunklets

# Single architecture and operating system

# Support multiple use case with one architecture

# Converged and automated

Converged control  
and  
orchestration

Federated  
data  
services

Standard platform  
foundation

HP Helion &  
HP OneView

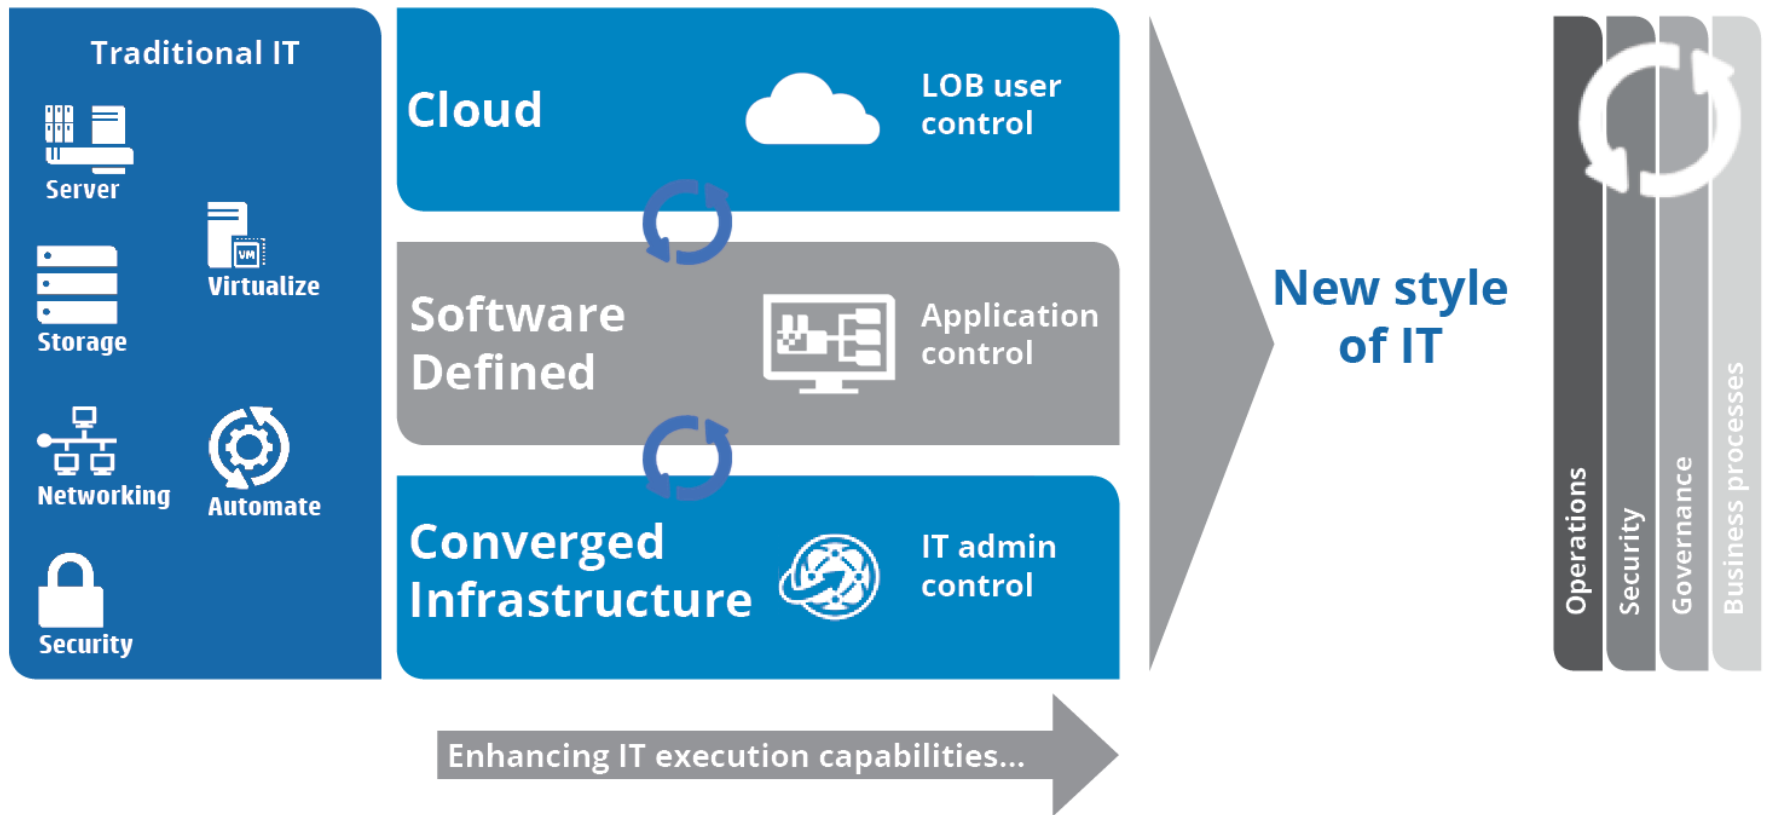

Software Defines

## TODAY

- Deploy and manage via HP Helion through OpenStack integration
- HP OneView automated provisioning for HP and Hypervisor environments

# Further acceleration requires new control options
